RE: Pflug, Kristy

LETTER

Bill R 3/15/12 1915

To Whom It May Concern:

Kristy Pflug is a 32-year-old right-handed female whom I have evaluated this past late fall and early winter for cervical transverse myelitis. Ms. Pflug has had gradual improvement over time. Concerned is raised regarding multiple psychosocial stressors that may have contributed to relatively immune suppressed state that contributed to her transverse myelitis. With this in mind, it was recommended that Ms. Pflug not work overnight hours as significant sleep deprivation can produce certain stressors that may exacerbate symptomatology. Please take this into consideration for Ms. Pflug's future work duties.
